Subject: Re: Structural engineer report query

Hi again Sam

In case we can't speak on the phone these are the questions I had:

- In your opinion how urgent is the work?

In my opinion, the work is not urgent, but it should be undertaken in the short/medium term. The chimney breast appeared in generally good condition other than the leaning, however I could not observe all sides fully. It is important that the work is undertaken to remove the risk of collapse entirely.

- Would the work have any impact on neighbours?

The only impact on No. 64 would be the feet for scaffolding being near/opposite their front door entrance. So long as the scaffolding has kickboards to prevent falling debris, then the impact will be minimal. I wouldn't expect there to be any impact on the neighbours in No. 68, any scaffolding will be away from their property.

- Would you recommend any work done on roof? If so what?

From a visual inspection, the roof structure appeared fine. The home buyers survey recommended a timber defect survey as there was "evidence of water stains to the underside of the ridgeline", so this might be a useful exercise for peace of mind.

- Do you have any recommendations of builders locally to undertake the work?

We don't unfortunately, however I would suggest looking on the Federation of Master Builders website to get a builder who is certified by them. Please see the link to the website below:

<https://www.fmb.org.uk/find-a-builder.html?msclkid=d6431948a33818ee4cd17e7c720e4c93>

- In costs breakdown you noted: 'These costs do not allow for payments to design consultants (architectural or structural services). We have also not allowed for any payments to local authorities for statutory consents (planning / building control).'

Would design consultants be needed before the work is undertaken? If so would you be able to give me an indication of costs - just a rough ballpark figure? And possibly a rough ballpark for statutory consents?

I wouldn't anticipate the works requiring any design input.

The reduction in height of the chimney stack to below the roof finishes may fall under "permitted development". If not covered under this, then it will require planning approval which typically costs £258 + VAT .

Building Control approval may also be required for covering of the hole in the roof once the chimney has been removed. Typical costs of Building Control for works of this size would be between £300-£400 + VAT.

It would be really useful to get some answers to these if that is possible?

Hi Stephen,

Thanks for your email.

Following the site visit at 66 Lower Court Road, please find attached our report. The report includes a description of the defects identified and contains recommendations on the remedial works required.

I also attach our invoice, your prompt payment would be appreciated.

I trust all makes sense. I will be happy to discuss any points further if needed.

Kind Regards,

Hi Sam

I have heard back from Luke at Cairds now. The seller has been updated and is happy for the inspection to go ahead. I'd like to arrange for this to happen as soon as you are able. Please forward any docs I need to sign to me and I will get them back to you as soon as possible - and also any payment details.

As to booking a date for the inspection - it might be easier for you to arrange this directly with Luke at Cairds. He has said he will be able to provide key collection.

Tel: 01372 743033
EMail: luke@cairds.co.uk

FYI - I am away from Friday midday until Tuesday next week.

Regards

Stephen Hamilton

Subject:
Structural
engineer
report query

Hi Mike

I have been given your email by Luke Levy at Cairds in Epsom. I am in the process of buying a house in Epsom and have had a level 2 survey provided to me by James Ambrose at Bramptons.

In the report James has

highlighted a potential risk to the building:

There is movement to the end gable wall and rear chimney on the flank wall - structural engineer report and quotations for remedial works required.

I'd like to go ahead with a report as I need to know the scope of potential costs to remedy the situation before buying the house. So a couple of questions:

- Is this something you would be interested in doing for me and do you have any availability at the moment.
- What kind of costs would I be looking at to get the report produced by you?

Many thanks

Stephen
